

## TOP 3 REASONS

Why You Should Use Polydeck Trommels

### 1. EXPERIENCE

We are the leading provider of synthetic modular screen media in the aggregate, coal and mining industries. We have been designing and manufacturing trommels that are used worldwide for over 30 years. Polydeck cares about your success and guarantees that our products deliver the results you need.

### 2. RELIABILITY

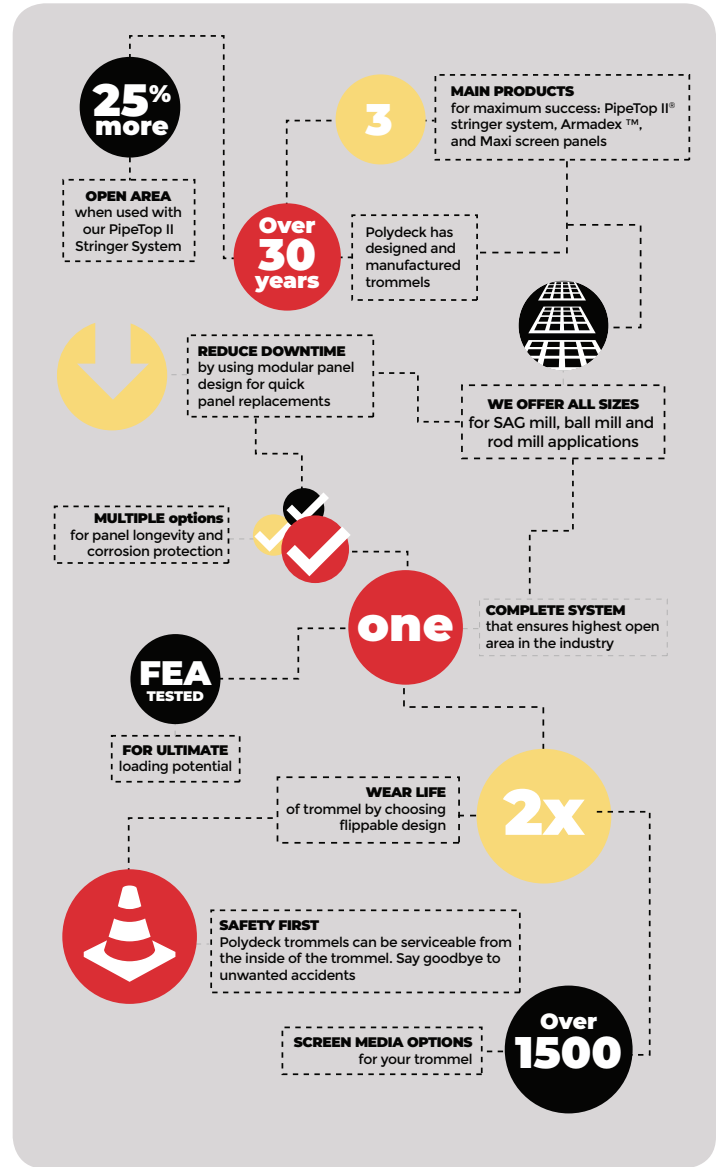

Our trommel system can be built to be flippable, potentially doubling the life of your trommels. Pair our trommel with our Maxi screen panels or our Armadex<sup>®</sup> extreme duty bolt-down rubber solution to maximize your screening efficiency.

### 3. OUR SCREEN MEDIA

Our Screen Media has the highest open area in the synthetic media industry. Because they are modular, they are easy to replace, and our injection molding technology ensures the closest tolerances and ensures quality and aperture size consistency. Using modular media will reduce your downtime and will allow throughput "tweaks" with hundreds of media options available.

## TROMMELS

Quick Facts

## PIPETOP Trommels

Achieve the highest open area in the industry and eliminate spillage issues by pairing our trommels with our PipeTop II<sup>™</sup> Stringer System. Finite Element Analysis (FEA) is performed on every trommel to ensure our designs hold up to real-life conditions and to meet your production specifications. There's a reason our trommels are in the most important mines worldwide.
